

TRACY SOLA: This set of activities is part of a formative re-engagement lesson for 1st graders about non-standard measurement. And so, in all of the activities, students will use non-standard measurement items, cubes, feet -- they could use many things in life, you know, paper clips, hands, anything, to measure something. We will primarily be using feet and cubes in these lessons to measure things, to measure how long things are, and to think about what that means, and -- and just the -- the big ideas of measurement, and -- and what does it mean if we are all measuring with our feet, but our feet are different lengths. And, you know, so -- so surfacing some ideas about length, small, medium, and large. And that will be interesting to see what happens.
