Carlos Cabana Lesson

Find the y-intercept and the x-intercepts of the following equations:

1. \( y = (6x + 1)(6x - 1) \)

2. \( y = x^2 - 3x + 6 \)

3. \( y = x^2 - 6x - 7 \)

4. \( y = x^2 - 5x + 4 \)

5. \( y = x^2 + 4x - 12 \)
